im not too familiar with vzmigrate, but from the follwing

undump...

vzquota : (warning) Quota is running for id 100 already

Adding IP address(es): 10.10.10.11

Setting CPU limit: 50

Setting CPU units: 800

Setting CPUs: 1

Error: undump failedStopping container ...

it looks like you are migrating your VPS to 10.10.10.11 and when starting the container it is given the same ip address 10.10.10.11.
