there are 2 choices here:

1. if you are not going to run multiple applications listening on the same port (e.g. >=2 httpd daemons etc.) then the best choice is NAT

[http://wiki.openvz.org/Using\\_NAT\\_for\\_VE\\_with\\_private\\_IPs](http://wiki.openvz.org/Using_NAT_for_VE_with_private_IPs)

2. if you really need name based hosting then it depends on protocols you need which protocols do you want?
