
Subject: [PATCH v3 0/7] SUNRPC: initial part of making pipefs work in net ns
Posted by [Stanislav Kinsbursky](#) on Mon, 26 Dec 2011 11:39:55 GMT
[View Forum Message](#) <> [Reply to Message](#)

This patch-set was created in context of clone of git branch:
`git://git.linux-nfs.org/projects/trondmy/nfs-2.6.git`.

v3:

1) Rebased on tag "v3.2-rc7".

v2:

1) Rebased of current repo state (i.e. all commits were pulled before apply)

This patch-set implements pipefs superblock creation per network namespace context instead of using single one for all possible contexts. Also, it provides pipefs dentries creation and destruction helpers for kernel routines.

Additional description of the idea about how to make RPC pipefs work per network namespace context can be found in the letter titled "SUNRPC: "RPC pipefs per network namespace" preparations", which has been sent already to `linux-nfs@vger.kernel.org`.

The following series consists of:

Stanislav Kinsbursky (7):

- SUNRPC: create RPC pipefs superblock per network namespace context
- SUNRPC: hold current network namespace while pipefs superblock is active
- SUNRPC: send notification events on pipefs sb creation and destruction
- SUNRPC: pipefs dentry lookup helper introduced
- SUNRPC: put pipefs superblock link on network namespace
- SUNRPC: pipefs per-net operations helper introduced
- SUNRPC: added debug messages to RPC pipefs
