I cant apply some rules of iptables. I think I have checked all the possibles erros but I cant found the problem.

In a container I get this

```
root@zentyal2:~# iptables -t nat -A PREROUTING -p tcp --dport 8080 -j DNAT --to-destination 10.30.105.212:8080
```

```
root@zentyal2:~# iptables -t nat -A POSTROUTING -j MASQUERADE
```

```
iptables: No chain/target/match by that name.
```

In host I have this modules activated

```
host:~# lsmod | egrep "xt_tcpudp|ip_conntrack|xt_state"
```

```
xt_tcpudp          2319  31
```

```
xt_state           1303  54
```

```
nf_conntrack       46563  10
```

```
nf_nat_irc,nf_nat_ftp,iptable_nat,nf_nat,xt_helper,xt_state,xt_conntrack,nf_conntrack_irc,nf_conntrack_ftp,nf_conntrack_ipv4
```

```
x_tables           13117  21
```

```
ip6t_REJECT,ip6_tables,xt_tcpudp,ipt_REDIRECT,iptable_nat,xt_helper,xt_state,xt_conntrack,xt_length,ipt_LOG,xt_hl,xt_tcpmss,xt_TCPMSS,ipt_REJECT,xt_DSCP,xt_dscp,xt_multiport,xt_limit,ip_tables,xt_MARK,xt_mark
```

Any idea or how can I test where is the problem? Thxx
