Er... you cannot use VSwap with RHEL/CentOS/Scientific Linux/etc. 5 openvz kernels because they don't support it. I think that much is obvious...

Sorry. I know it looks like a nice thing to have...

OK, joking aside. You might be able to run a RHEL 6 kernel on a RHEL 5 system (or CentOS or whatever), without upgrading the node OS. I'd do some testing before trying this on a production server, though.

Happy New Year
