Subject: Firmware Conflict on Latest Kernel

---

I am running CentOS 6.2 with OpenVZ 2.6.32-042stab036.1 on x86\_64 and trying to update to the latest build `vzkernel-2.6.32-042stab046.1.x86_64.rpm`

The `vzkernel-firmware` is giving me a conflict with the current version:

file `/lib/firmware/iscsi/iscsi_firmware.bin` from install of  
`vzkernel-firmware-2.6.32-042stab046.1.noarch` conflicts with file from package  
`vzkernel-firmware-2.6.32-042stab036.1.noarch`

file `/usr/share/doc/vzkernel-firmware-2.6.32/WHENCE` from install of  
`vzkernel-firmware-2.6.32-042stab046.1.noarch` conflicts with file from package  
`vzkernel-firmware-2.6.32-042stab036.1.noarch`

Has anybody else seen this and what I am doing wrong? I have updated to the latest version for the last four months without issue but not it is not happy.
