Subject: Running puppetd in openvz displays a warning
Posted by Benjamin Henrion on Wed, 04 Jan 2012 09:24:07 GMT

Hi,

I am running puppet clients in openvz containers, but I get a warning
message like this:

```
 ============================================================ =
sabayon / # puppetd --test
Could not retrieve selinux: Cannot allocate memory - /proc/self/mountinfo
Could not retrieve selinux: Cannot allocate memory - /proc/self/mountinfo
Could not retrieve selinux: Cannot allocate memory - /proc/self/mountinfo
Could not retrieve selinux: Cannot allocate memory - /proc/self/mountinfo
Could not retrieve selinux: Cannot allocate memory - /proc/self/mountinfo
Could not retrieve selinux: Cannot allocate memory - /proc/self/mountinfo
Could not retrieve selinux: Cannot allocate memory - /proc/self/mountinfo
info: Caching catalog for sabayon
info: Applying configuration version '1325668910'
notice: Finished catalog run in 0.01 seconds
 ============================================================ =
```

I compiled puppetd without the selinux use flag, any idea how to get
rid of this warning?

Best,

"In July 2005, after several failed attempts to legalise software
patents in Europe, the patent establishment changed its strategy.
Instead of explicitly seeking to sanction the patentability of
software, they are now seeking to create a central European patent
court, which would establish and enforce patentability rules in their
favor, without any possibility of correction by competing courts or
democratically elected legislators."
