Subject: Which CTID for a PID ?
Posted by jmginer on Wed, 04 Jan 2012 13:46:36 GMT

Hi, I'm having freeze problems in a server with CentOS 6

tested with 2.6.32-042stab039.11 and 2.6.32-042stab044.11

server blocks and not any error in secure o messages logs.

I have started a console with "htop" command running, and in all downtimes I see a httpd process with 60% of CPU load.

How can I see what VM is running this httpd command?

I try to install vztop, but seems dont run with CentOS6, only with CentOS5.

Any idea to find the malicious CTID ?

Thanks!!
