Dear friends.

I have serve centos 5 x86_64 with opnevz and all work, and move container to centos 6 x86_64 (new sever).

When I start container in new server, but netboard virtual venet0 and veneto:0 don't UP.

When I start manually venet0, I have receid follow messae:

[root@srv002 /]# ifup venet0 Bringing up interface venet0: Configuring interface venet0: net.ipv4.conf.venet0.send_redirects = 0 Configuring ipv6 venet0: ifup-venet WARNING: Device list is empty

I compare file ifcdf-venet0 between old server and new server are sames.

Thanks for help
