Hello,

Until now we are using Centos 5 32 bit kernels with enterprise flavor (PAE+4/4GB split) because we are using it on 16-24GB RAM nodes with alot of containers and we need 32 bit containers.

Now, as stable CentOS 6 kernel version is available, we consider to choose CentOS 6 with 2.6.32 stable kernel.

But I have not found enterprise version of this kernel in rpms.

Does this rh6 kernel PAE+4/4GB split version is supported/available?

Thank you for your answers.
