Hi,

is there a chance for new OpenVZ Kernel based of the next Official LTS Kernel 3.0?

Also all kernels on http://git.openvz.org are "frozen" and .32 openvz kernel is many merges behind the .32 stable tree. Are there plans to continue support for this kernel?

I realy like OpenVZ and for now i will not switch to LXC, but if there are no updates or OpenVZ is death maybe i need to switch.
