---

This patch introduces network namespace filter for service destruction function.

Nothing special here - just do exactly the same operations, but only for transports in passed networks namespace context.

BTW, BUG\_ON() checks for empty service transports lists were returned into svc\_destroy() function. This is because of switching generic svc\_close\_all() to networks namespace dependable svc\_close\_net().

Signed-off-by: Stanislav Kinsbursky <[skinsbursky@parallels.com](mailto:skinsbursky@parallels.com)>
