---

I also has network device freeze daily .

This happen on Centos6, Hardware is Dxll R410 (Ram: 16G)

I tested it with memtest86+

No any useful info. on log file & console ....

There have 4 VPS only, and it configured by "vzsplit -n4"

Then i switch to Debian6, but network device still freeze -\_\_\_-

The good news is it freeze around 2 month one time

I think it is acceptable ^^
