Hi,

I am trying updatedb on a gentoo openvz container, the HN is a debian squeeze kernel.

Updatedb segfaults, and when I strace it, I find that:

```
# cat /proc/self/mountinfo  
cat: /proc/self/mountinfo: Cannot allocate memory
```

Any idea how to fix that?

There is a bug filed here:

<http://bugs.debian.org/cgi-bin/bugreport.cgi?bug=655385>

But I have no idea how to fix it.

Best,

"In July 2005, after several failed attempts to legalise software patents in Europe, the patent establishment changed its strategy. Instead of explicitly seeking to sanction the patentability of software, they are now seeking to create a central European patent court, which would establish and enforce patentability rules in their favor, without any possibility of correction by competing courts or democratically elected legislators."
