Subject: Do ARP packets to announce the container IP
Posted by jmginer on Sun, 19 Feb 2012 11:21:19 GMT

Hi,

my problem is that I have configured my hosts in the vrack solution with OVH.
help.ovh.co.uk/RipeVrack#link7

and when I boot the host, some containers not run, I need stop the container and start, and then the container run Ok, but after a few hours, the container is again unavailable and I need to reboot again.

I think is because the host need to do a ARP packet for each container IP to the network.

Any idea how to solve?

My sysctl file is:

net.ipv4.conf.default.forwarding=1
net.ipv4.conf.default.proxy_arp = 1
net.ipv4.conf.eth0/XXXX.proxy_arp = 1 #XXXX is the number of my vlan

Thanks
