
Subject: ip tunnel in VPS: ioctl: No such device

hello,

i have the following problem: i need to create a tunnel within a VPS node, like this:

```
ip tunnel add test mode sit remote 1.2.3.4 local 4.3.2.1 dev eth0
```

however, i'm getting an error:

ioctl: No such device

so, is there a way to permit ip tunnels within a VPS?

thanks for any input, it's much appreciated here.
