At dmesg log after hard reboot I not see any messages about mass restarting containers at few seconds before halting.

"Fatal resource shortage" solved by add resources to container ( many failcnt on privvmpages )

"BUG: Quota files for XXXX are broken: no quota engine running" solved by restart quota ( vzctl stop XXXX, vzuota off XXXX, vzquota on XXXX, vzctl start XXXX )

Quota fixed by me after last halt.

At other HN with same environment ( kernel, OS version, version of vz packets, version of templates ) I not see any troubles.
