At dmesg log after hard reboot I not see any messages about mass restarting containers at few seconds before halting.

"Fatal resource shortage" solved by add resources to container (many failcnt on privvmpages)

"BUG: Quota files for XXXX are broken: no quota engine running" solved by restart quota (vzctl stop XXXX, vzuota off XXXX, vzquota on XXXX, vzctl start XXXX)

Quota fixed by me after last halt.

At other HN with same environment (kernel, OS version, version of vz packets, version of templates) I not see any troubles.
