Hi,

After some researches i did find my problem.

I also saw that some others dudes have the same problem.

In fact a solution is to disable the ipsec policy and encryption for the interface.

I don't really understand why this is a problem but disabling these two thing did solve my problem.

```
net.ipv4.conf.all.disable_xfrm = 1
net.ipv4.conf.all.disable_policy = 1
```

FYI:

```
disable_policy
  BOOLEAN
  Disable IPSEC policy (SPD) for this interface
```

```
disable_xfrm
  BOOLEAN
  Disable IPSEC encryption on this interface, whatever the policy
```

Maybe the ipsec policy is applied twice when using a VE ? thus causing lot of trouble..
