You might manage to request reference to the 'next' item while holding the lock. So maybe a loop that has:

```
error = ...  
if (error) {  
    rpc_release_client(clnt);  
    break;  
}  
spin_lock(&sn->rpc_client_lock);  
next_clnt = list_next(clnt);  
if (next_clnt)  
    atomic_inc(&next_clnt->cl_count);  
    spin_unlock(&sn->rpc_client_lock);  
    rpc_release_client(clnt);  
    clnt = next_clnt;  
} while (clnt != NULL);
```
