Hi folks,

I have a problem with one on my containers servers. I don't know why but it's completely impossible to list any file inside one directory.

I think is because this directory contains a lot of others files, thousands of thousands

Anyway, if you try to "ls, rsync, cp, or whatever" you only waste time because nothing happens just IOWait and after a couple of hours ... nothing nothing nothing

Do you know if there is a similar tool like debugfs for vzfs. I would like to know if it's possible to extract file through inodes in vzfs

thank you in advance
