Hello,

I am trying to install ulogd and ulogd-mysql on Debian 6.0 VE using aptitude. I am getting errors like:

```
Starting netfilter userspace log daemon: Sat Mar 10 10:34:08 2012 <8> ulogd.c:737 unable to
create ipulogd handle
```

```
ERROR: Unable to bind netlink socket: No such file or directory
```

```
invoke-rc.d: initscript ulogd, action "start" failed.
```

```
dpkg: error processing ulogd (--configure):
```

```
 subprocess installed post-installation script returned error exit status 1
```

```
dpkg: dependency problems prevent configuration of ulogd-mysql:
```

```
 ulogd-mysql depends on ulogd (= 1.24-3); however:
```

```
  Package ulogd is not configured yet.
```

```
dpkg: error processing ulogd-mysql (--configure):
```

```
 dependency problems - leaving unconfigured
```

```
Errors were encountered while processing:
```

```
 ulogd
```

```
 ulogd-mysql
```

and ulogd does not work. How can I do to enable ulogd for the Debian VE? Is there something to do with the hardware node?

Using kernel version 2.6.18-274.18.1.el5.028stab098.1 on CentOS 5.8. iptables is configured and working on VE and HW node.

Thanks
