here's a "poor mans vzps" in bash:

```
#!/bin/bash

PIDLIST=(`ps ax | grep -v PID | awk '{print $1}'`)

findpids(){
veidesired=$1
pidlist=

for i in `seq 0 ${#PIDLIST[*]}`; do
    pid=${PIDLIST[$i]}
    [ -f /proc/$pid/status ] || return
    veid=`grep envID /proc/$pid/status | awk -F: '{print $2}'`
    if [ ${veid} = ${veidesired} ]; then
        pidlist=$(echo $pidlist $pid)
    fi
done
}

findpids $2
if [ "${pidlist}" ]; then
    ps $1 -p "$pidlist"
fi

exit 0
```

takes 'ps' arguments and VE ID as a second one, example:

`./ovzps fwv 10000`
