Hello,

The same happens in CentOS 5.8 CT0 and Debian 6.0 VZ. I have enabled klogd in VZ and logging works in VE right now.

```
# uname -r
2.6.32-308.el5.028stab099.3
```

```
# ls /etc/rc* | grep klogd
K03sysklogd
K03sysklogd
S16sysklogd
S16sysklogd
S16sysklogd
S16sysklogd
K03sysklogd
```

```
# update-rc.d klogd defaults
update-rc.d: using dependency based boot sequencing
```

```
# ls /etc/rc* | grep klogd
K01klogd
K03sysklogd
K01klogd
K03sysklogd
S16sysklogd
S17klogd
S16sysklogd
S17klogd
S16sysklogd
S17klogd
S16sysklogd
S17klogd
K01klogd
K03sysklogd
```

Thanks,

Onur R. Bingol
