Hi,

I have the same problem with a converted CT.

I converted from simfs to ploop using

```
vzctl convert <CTID> --layout ploop
```

After conversion I started the CT and tried to resize:

```
vzctl set <CTID> --diskspace 75G --save
```

Can't ioctl mount_point: No such file or directory

Failed to resize image: Can't ioctl mount_point: No such file or directory

[3]

CT configuration saved to /etc/vz/conf/<CTID>.conf

I can start/stop/chkpnt and restore the CT without any problems.

Only resize does not work.

I am Using

CentOS 6.2 64bit

vzctl version 3.1

ploop version 1.1

Kernel 2.6.32-042stab053.3

best regards,

Sirk
