According to this thread comments.gmane.org/gmane.linux.altlinux.sysadmins/17447 they had a similar issue and was pointed to vzctl-3.0.26.2-alt2

Debian Squeeze uses 3.0.24-12 but I have another 2 systems using Squeeze and neither of them have this issue so I'm not sure...

I see I can download another vzctl @ wiki.openvz.org/Download/vzctl/

But I'm not sure how to install this (do I just move the files into the correct location? do I need to reboot after?) and if it will conflict with the rest of the Debian packages?

Would anyone know?
