Hello,

I got an critical issue with vzdump. I start vzdump with a cronjob and the system gets a kernel panic.

syslog:

```
Apr 2 04:28:37 system-1 vzdump[469932]: INFO: starting new backup job: vzdump 100013 --quiet --bwlimit 20480 --dumpdir /mnt/pve/storage/vs-13/backup/ --exclude-path var/lib/mysql/.+
```

```
Apr 2 04:28:37 system-1 vzdump[469932]: INFO: Starting Backup of VM 100013 (openvz)
```

vzdump.log:

```
Apr 02 04:28:37 INFO: creating lvm snapshot of /dev/mapper/pve-data ('/dev/pve/vzsnap-system-1-0')<-- and it hangs
```

After restarting the system fsck started with these logs:

```

I can not find the issue. How I can solve the failure? It happens 2 times last 2 weeks.

Best regards,  
Alex
