Subject: Re: new linux user would like to try openvz a few questions
Posted by Ales on Tue, 10 Apr 2012 15:52:09 GMT

It's a fair question and it has been addressed in a couple of threads here before. Basically, current openvz kernels won't work with Fedora 16 due to systemd.

I'd recommend using CentOS 6 or Scientific Linux 6 as your operating system. They are both clones of Red Hat Enterprise Linux and openvz will work perfectly on either.

Also, KVM should work just fine on Fedora 16, I don't know about Kororaa though. A quick glance on their web page makes me think that they prefer VirtualBox.
