I am about to release vzctl-3.2 (a.k.a. "jetlagged in san francisco") with some nifty new features and improvements.

Preliminary list of changes can be seen at

- * <http://wiki.openvz.org/Download/vzctl/3.2/changes>
- * <http://git.openvz.org/?p=vzctl;a=log>

I have made a nightly build available at

- * <http://download.openvz.org/utls/nightlies/vzctl/current/>
- and I want you to test it and report your results here or to bugzilla.openvz.org

Note that you need to upgrade ploop and ploop-lib packages to 1.2 before trying
to install this version (in case of yum it should happen automagically).

Some more info about vzctl nightly builds are available at:

- * <http://wiki.openvz.org/Download/vzctl/nightly>

Regards,
Kir.
