Hi,

I'm trying to setup NFS4 in a container but are having trouble getting the rpc.idmapd daemon process to work.

At startup rpc.idmapd tries to access two proc files which are missing in the container.

/proc/net/rpc/nfs4.nametoid/channel

/proc/net/rpc/nfs4.idtoname/channel

They are available on the host node through kernel module nfsd.ko

How do I configure OpenVZ to get these?

Running CentOS 6.2 with

042stab053.5< [http://wiki.openvz.org/News/updates#Kernel\\_RHEL6\\_042stab053.5\\_released](http://wiki.openvz.org/News/updates#Kernel_RHEL6_042stab053.5_released)>

Regards,  
Bjorn
