Hi everyone,

We are testing ubuntu 12.04, but the problem is we do not want to upgrade to a newer kernel because of stability and our inside compatibility. After adding "ubuntu-12.04 2.6.32" to /etc/vz/osrelease.conf we have managed to start, but the problem is that no services are starting. It does after starting them manually. Perhaps this is an issue with upstart? Does anyone have any clues where to start looking for?

Thanks!
