Hi,

I've the same problem :

Apr 9 01:19:41 xxxx kernel: Holy Crap 1 0 26466,22969(tlsmgr)

Apr 9 01:19:41 xxxx kernel: Holy Crap 2 0 26466,22969(tlsmgr)

seems to happen at the exact same moment of a vzdump.

Result 1 of my VE is blocked in Uninterruptible state.

```
root    3863 312351 0.0 10164 408 ?      Ds   Apr09 10557290:44 vzctl --skiplock chkpnt 100
--suspend
```

My version :

pve-manager: 1.8-18 (pve-manager/1.8/6070)

running kernel: 2.6.32-4-pve

pve-kernel-2.6.32-4-pve: 2.6.32-33

qemu-server: 1.1-30

pve-firmware: 1.0-11

libpve-storage-perl: 1.0-17

vncterm: 0.9-2

vzctl: 3.0.28-1pve1

vzdump: 1.2-14

vzprocps: 2.0.11-2

vzquota: 3.0.11-1dso1

Did you find a solution and an explanation of this "Holy Crap" ?

Thks
