I have the same problem:

```
May 14 16:51:01 wfsr010 kernel: Holy Crap 1 0 909551,469(apache2)
May 14 18:17:22 wfsr010 kernel: Holy Crap 1 0 979972,373(mysql)
May 14 18:22:18 wfsr010 kernel: Holy Crap 1 2 979935,336(mysql)
May 14 18:23:17 wfsr010 kernel: Holy Crap 1 0 989531,129(sshd)
May 14 18:23:17 wfsr010 kernel: Holy Crap 1 0 989776,374(mysql)
May 15 17:19:45 wfsr010 kernel: Holy Crap 1 0 989776,374(mysql)
May 15 17:54:43 wfsr010 kernel: Holy Crap 1 0 2455,40(init-logger)
May 15 18:40:50 wfsr010 kernel: Holy Crap 1 0 22862,374(mysql)
```

I think this problem arises when I try to chkpnt a container.

my kernel:

```
Linux wfsr010 2.6.32-11-pve #1 SMP Wed Apr 11 07:17:05 CEST 2012 x86_64 GNU/Linux
```

my vzctl version:

```
vzctl version 3.0.30.2-11.git.aefc8ef
```

I use proxmox 2.1 and I am up to date.
