I saw this also

tested on 2.6.32-042stab056.2

ploop 1.2-1

it happens when CT is in ploop and when you stop CT

don't know does it have any side effect...

do you need bug report or it's just some harmless message?

in dmesg:

[632.466904] EXT4-fs (ploop0p1): Unrecognized mount option "relatime" or missing value

[632.476950] proc: unrecognized mount option "relatime" or missing value
