from you grub.conf and boot log's I see that you installed 32bit kernel while original is 64bit kernel

also you tried to boot kernel version 55.10, while you show that you are installing 55.12 kernel version...

please remove vzkernel and ensure that you installed 64bit vzkernel and that you realy try to boot this 64bit kernel

if you did everything correct than I suggest make it reproducable and submit a bug
