Hello,

I was installing openvz via HyperVM but I have noticed that it is the same when I like to do it via command line.

(yum clean all is performed as you can see, server is clean after installation centos 5.8 x64)

```
[root@h159 ~]# yum clean all
Loaded plugins: fastestmirror, security
Cleaning up Everything
Cleaning up list of fastest mirrors
[root@h159 ~]# yum -y install vzctl
Loaded plugins: fastestmirror, security
Determining fastest mirrors

Are the opensv mirrors out of sync? I can install without the problem other Centos packages.
