---

Hi,

Just filed this bug at Funtoo about their openvz images:

<http://bugs.funtoo.org/browse/FL-33>

[http://ftp.heanet.ie/mirrors/funtoo/funtoo-stable/openvz/x86-64bit/funtoo-stable-generic\\_64-2012-01-22.tar.xz](http://ftp.heanet.ie/mirrors/funtoo/funtoo-stable/openvz/x86-64bit/funtoo-stable-generic_64-2012-01-22.tar.xz)  
[http://ftp.heanet.ie/mirrors/funtoo/funtoo-current/openvz/x86-64bit/funtoo-current-generic\\_64-2012-05-22.tar.xz](http://ftp.heanet.ie/mirrors/funtoo/funtoo-current/openvz/x86-64bit/funtoo-current-generic_64-2012-05-22.tar.xz)

Those images suffer from the fact that I cannot do "vzctl enter 100".

Can anyone try to reproduce that?

On my debian HN, I made a symlink to gentoo.conf.

Best,

--

"In July 2005, after several failed attempts to legalise software patents in Europe, the patent establishment changed its strategy. Instead of explicitly seeking to sanction the patentability of software, they are now seeking to create a central European patent court, which would establish and enforce patentability rules in their favor, without any possibility of correction by competing courts or democratically elected legislators."
