[Adding Ying to CC - they are using hierarchies AFAIU in their workloads]

So what you are proposing is to have all subtrees of the root either hierarchical or not, right?

> This seems needlessly complicated. :(

Toggle wouldn't help much I am afraid. We would still have to distinguish (non)hierarchical cases. And I am not sure we can make everything hierarchical easily.

Most users (from my experience) ignored use_hierarchy for some reasons and the end results might be really unexpected for them if they used deeper subtrees (which might be needed due to combination with other controller(s)).
