Subject: Ubuntu 12.04 issue
Posted by Esm on Fri, 29 Jun 2012 13:13:33 GMT

Hi,

I've got a strange problem which only seems to be occuring with the ubuntu 12.04 template.

After installing, all goes well, I can't get into the VPS with vzctl enter VEID. I can however access the VPS by SSH. The only noticeable difference with other VPSes is that / is not mounted to /dev/simfs but instead to /var/lib/vz/private/VEID.

Does anyone know what could be causing this?

Thank very much for helping me.

Kind Regards,

Esme
