hi all:

I'm trying the migration of ploop from node1 to node2

the directory /vz/private of node1 is a local directory on node1.

the directory /vz/private of node2 is a nfs which I mounted from node3

I started the CT with ploop on node1

I migrated the CT as: `vzmigrate -v --online -r no 192.168.5.159 1113`

and I got the message as follow:

Starting online migration of CT 1113 to 192.168.5.159

OpenVZ is running...

Loading /etc/vz/vz.conf and /etc/vz/conf/1113.conf files

Check if ploop is supported on destination node

Next unused minor: 0

Check IPs on destination node:

Preparing remote node

Copying config file

1113.conf 100% 1761 1.7KB/s 00:00

No changes in CT configuration, not saving

Creating remote container root dir

Creating remote container private dir

Syncing private

Live migrating container...

Copying top ploop delta with CT suspend

Sending /vz/private/1113/root.hdd/root.hdd

Setting up checkpoint...

suspend...

get context...

Checkpointing completed successfully

Dumping container

Setting up checkpoint...

join context..

dump...

Checkpointing completed successfully

Copying dumpfile

dump.1113 100% 3887KB 3.8MB/s 00:00

Undumping container

Restoring container ...

Starting container ...

Error in do_lock (lock.c:71): Error in flock(/vz/private/1113/root.hdd/DiskDescriptor.xml.lck):

Input/output error

Error in do_lock (lock.c:71): Error in flock(/vz/private/1113/root.hdd/DiskDescriptor.xml.lck):

Input/output error

Failed to mount image: Error in do_lock (lock.c:71): Error in flock(/vz/private/1113/root.hdd/DiskDescriptor.xml.lck): Input/output error [23]

Error: Failed to undump container

Resuming...

Dose anyone know the problem? is it fixable or some wrong with my configuration?

BTW : is it possible to put the private of CT on the nfs?

Thanks!

Tommy
