Subject: sharing directory between two VE

Hi,

For the purpose of a migration, I'd need to share a directory between two VE, context 1 and 2. I've tried, with no success:

- mounting /tmp/shared.ext2 from the host to both guests using simfs and -o loop
- mounting --bind /tmp/shared.dir from the host to both guests using mount --make-shared
- mounting --bind from the 1st VE to the 2nd

Is there another way to try ... ?

Using vserver, I used to change the context of the files, does OpenVz offer this capability ?

Best Regards,

Olivier
