## Subject: ps stuck
Posted by zvf1 on Fri, 06 Jul 2012 09:03:59 GMT

Hi,

I have critical problem. It is the second time it happens ( in a month )

The problem symptom is that load increases to very high numbers.

What I can see is that ps -ef command is stuck from the openvz server on specific process.

strace ps -ef shows that it is stuck on trying to read /proc/pid/cmdline of some process

Manual "ls" on /proc/pid stuck too ( for the specific process )

I can identify the ve on which the stuck process is but it's not possible to kill it.

My previous experience show only reboot of the openvz server helps.

The openvz server is installed on CentOS 6.2 , openvz version 2.6.32-042stab044.17

Any idea what is the problem ?

Thanks a lot,
Zeev
