No it is this bug:

<http://bugs.debian.org/cgi-bin/bugreport.cgi?bug=655385>

It has been fixed by a patch, but not applied to debian kernels.

I am trying this repo at the moment to see if it fixes my problem:

<http://deb.clazzes.org/debian/sources.list.d/squeeze/squeeze-contrib-1.list>

"In July 2005, after several failed attempts to legalise software patents in Europe, the patent establishment changed its strategy. Instead of explicitly seeking to sanction the patentability of software, they are now seeking to create a central European patent court, which would establish and enforce patentability rules in their favor, without any possibility of correction by competing courts or democratically elected legislators."
