Subject: VPS as iscsi-target?

Hi all,

has anyone ever tried to use a VPS as an iscsi-target? Up to know, I have Linux only used as iscsi initiator. I'm aware of http://iscsitarget.sourceforge.net/ and there is a note that it needs a kernel version of 2.6.14 or later. So maybe there is a way to get a VPS acting as iscsi-target with the openvz development kernel 2.6.16?

Any ideas if this can work? Has someone successfully tried this?

best wishes,
Werner
