BTW, sorry for not replying before (vacations + post-vacations laziness)

I would be interested in adding /proc virtualization to the discussion.
By now it seems userspace would be the best place for that to happen, in
a fuse overlay. I know Daniel has an initial implementation of that, and
it would be good to have it as library that both OpenVZ and LXC (and
whoever else wants) can use.

Shouldn't take much time...
