Hi all,

Finally got openvz installed for our development environments. Everything went well but I noticed 'who' or 'w' command doesn't show any result.

```
[root@dev-web ~]# w
15:24:56 up 1:45, 0 users, load average: 0.00, 0.00, 0.03
USER  TTY  FROM          LOGIN@  IDLE   JCPU   PCPU   WHAT
[root@dev-web ~]# who
[root@dev-web ~]#
```

Can anyone help me on how to get this fix?
