Subject: Good use case for OpenVZ ?
Posted by Tlvenn on Tue, 25 Jul 2006 07:48:03 GMT

Hi, we are a web company which operates a J2EE website with 4 dual opteron servers, 2 dedicated for the wep app (java only) and 2 dedidcated to the DB (Postgresql 8.1).

It's notorious that webapp tends to use CPU with little IO and the database, quite the contrary, uses IO and little CPU.

If the above is right, it would be more valuable to run both webapp and db application on the same hardware to correctly use its ressources (both CPU and IO) and openVZ/Virtuozzo seems a pretty good candidate.

Am i right on this stuff ? What do you think ?

Thanks in advance for your time.
Chris
