
Subject: Overlay filesystems in OpenVZ kernel

Does anyone know if there are any overlay filesystems(overlayfs, unionfs, aufs, mini_fo, etc) that work with openvz? I'm using the latest stable RHEL6 kernel.
I've tried compiling aufs but all the patches fail to apply.

The filesystem needs to be in-kernel(not FUSE) for performance reasons.

I'm looking for an open source alternative to vzfs which is proprietary .
