## Subject: Overlay filesystems in OpenVZ kernel Posted by xaxaxa on Sun, 12 Aug 2012 19:31:08 GMT

Does anyone know if there are any overlay filesystems(overlayfs, unionfs, aufs, mini\_fo, etc) that work with openvz? I'm using the latest stable RHEL6 kernel. I've tried compiling aufs but all the patches fail to apply.

The filesystem needs to be in-kernel(not FUSE) for performance reasons.

I'm looking for an open source alternative to vzfs which is proprietary .
