Hello!

I've a little C Script which works perfectly with Kernel from 2.4 - 2.6.17.x on every normal system.

On a VPS getcwd returns always NULL.

Here is some code - like the script works:

```
chroot("/home");
getcwd(cwd, MAX_LENGTH);
```

on the a normal hardware server getcwd works correkt - on a VPS (same installation / same image) it always returns NULL and cwd is empty.

Stefan
